Design Thinking and Predictive Analytics for Data Products

August 24, 2020

0.0.1 Dataset Description

Our dataset is from a study of heart disease that has been open to the public for many years. The study collects various measurements on patient health and cardiovascular statistics, and of course makes patient identities anonymous.

There are 14 columns in the dataset, where the patient_id column is a unique and random identifier. The remaining 13 features are described in the section below.

1. age
2. sex
3. chest pain type (4 values)
4. resting blood pressure
5. serum cholestoral in mg/dl
6. fasting blood sugar > 120 mg/dl
7. resting electrocardiographic results (values 0,1,2)
8. maximum heart rate achieved
9. exercise induced angina
10. oldpeak = ST depression induced by exercise relative to rest
11. the slope of the peak exercise ST segment
12. number of major vessels (0-3) colored by flourosopy
13. thal: 3 = normal; 6 = fixed defect; 7 = reversable defect

0.0.2 Attributes types

Real: 1,4,5,8,10,12

Ordered:11,

Binary: 2,6,9

Nominal:7,3,13

Data is provided courtesy of the Cleveland Heart Disease Database via the UCI Machine Learning repository.

Aha, D., and Dennis Kibler. "Instance-based prediction of heart-disease presence with the Cleveland database." University of California 3.1 (1988): 3-2.

0.0.3 Data preparation and/or cleaning

The data will be loaded and explored. Since there are categorical variables, one hot encoding is done to transform to numeric. Missing data will ve treated.

0.0.4 Import Libraries

 0.        , 0.        , 1.        ]])
```

[55]:
```
logic = LogisticRegression(random_state=0)
```

[56]:
```
model2 = logic.fit(X_train_scaled,y_train)
```

[57]:
```
y_pred2 = model2.predict(X_test_scaled)
```

You can do comparison with test data actual value with predicted data

[58]:
```
y_pred2[:10] #Predicted values
```

[58]:
```
array([1, 0, 0, 1, 1, 0, 0, 0, 0, 1], dtype=int64)
```

[59]:
```
y_test[:10] # Test data values
```

[59]:
```
160    1
128    0
212    0
172    1
218    0
85     0
263    0
254    0
183    0
133    1
Name: disease, dtype: int64
```
